Sequence 2, Application US/09120582
Patent No. 6087558
FACENT INFORMATION:
APPLICANT: Howard, John A.
APPLICANT: Hood, Elizabeth
TITLE OF INVENTION: COMMERCIAL PRODUCTION OF PROTEASES IN PLANTS
FILE REFERENCE: 10014
CURRENT APPLICATION NUMBER: US/09/120,582
CURRENT FILING DATE: 1998-07-22
NUMBER OF SEQ ID NOS: 2
SOFTWARE: PATENTIN VET. 2.0

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The specification describes a fish serine proteinase. The proteinases are useful as medicaments, for treating and preventing a disease in a human or an animal such as pain, acute inflammation, chronic think and inflamed joints, bursitis, ostcoarthritis, checoarthritis, inflamed joints, bursitis, septic arthritis, cheumatoid arthritis, septic arthritis, rheumatoid arthritis, septic arthritis, rheumatoid arthritis, septic arthritis, consorvantalis, acne, eczema, facial sebornaic eczema of the hands, face or neck, foreskin infections, athlete's foot, fistulae infections, infections, arthlete's foot, fistulae infections, infections, wrinkles, scars, chelloids, boils, warts and allergic itch, hemorrhoids, wounds to infections, wounds from burns, fungal infections and immunological and autoimmune diseases. They are also useful for removing dead or peeling skin from otherwise healthy skin, and for treating or preventing a disease in which pathogenesis is caused by bacteria, virus, fungus, parasite or a protozoan or a receptor mediated binding is involved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cell activation; pancreas; treatment; cardiovascular disease; trauma; inflammatory disease; autoimmune disease; arthritis; diabetes; stroke; organ reflection; ischemia; Alzheimer's disease; myocardial infarction; haemorrhagic shock; diabetic retinopathy; venous insufficiency; angina; trauma; protease inhibitor; hypertension; sepsis.
                                                                                                                                                                                                     Fish serine proteinase, useful as a cosmetic, medicament for treating eczema, psoriaais, arthritis, and in the manufacture of the medicament for treating, preventing pathogenic diseases involving receptor mediated binding

This invaling compositions which involves preparing a cell activating composition compositions which involves preparing a cell activating composition compositions which involves preparing a cell activating composition compositions which involves because to be removal composition compositions with particulates removed, with a protease; and compositions that carticulates from the homogenate and selecting fractions that exhibit complication activaty. The methods can be used for improving traction activity. The methods can be used for improving congan rejection, diabetes and diabetic complications atrock, ischemia, congan rejection, diabetes and diabetic complications; atrock, ischemia, congan rejection, diabetes and diabetic complications; atrock, ischemia, altabetment of a non-human subject.

Conference in the veterinary treatment of a non-human subject.

Conference diseases and deficiencies. The detection of an elevated level of these diseases and deficiencies. The detection of an elevated level of presence of superoxide dismutase (SOD) indicates leukocyte up completion, e.g. indicative of the onset of an acute cardiovascular confiscence of superoxide dismutase (SOD) indicates leukocyte up condition, a disorders, such as disease onset of implant or immune compromised condition e.g. hypertenation of an planma or whole blood and a low level in the presence of SOD is indicative of a chronic or immune compromised condition e.g. hypertenation or sepals. The specification describes a fish serine proteinase. The proteinases are useful as medicaments, for treating and preventing a disease in a human or an animal such as pain, acute inflammation, chronic inflammation, arthritis, inflammation, bursitis, observativis, chemical arthritis, protein arthritis, protein arthritis, protein arthritis, repeint arthritis, repeint arthritis, septic arthritis, repeint arthritis, acon, eczema, facial sebortheic eczema, eczema of the hands. Consort foreskin infections, athlete's foot, fistules infections, infected topical ulcers, navel infections in newborns, wrinkles, scars, confections, boils, warts and allergic itch, hemorrhoids, wounds, wound from burns, fungal infections and immunological and autoimmune diseases. They are also useful for removing dead or peeling skin from otherwise healthy skin, and for treating or preventing a disease in which pathogenesis is caused by bacteria, virus, fungus, parasite or a protozoan or a receptor mediated binding is involved. The present sequence represents the amino terminal of bovine trypsin A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0;

This invention describes a novel method for the use and preparation of cell activating compositions which involves preparing a cell activating cell activating composition comprising (a) homogenizing panceatic tisue in buffer at about neutral or higher ph to produce a homogenate; (b) removing particulates from the homogenate; (c) optionally incubating the about neutral or higher ph to produce a homogenate; (d) removing the homogenate and selecting fractions that exhibit complication activity. The methods can be used for improving treatment outcome or reducing risk of treatment of e.g. cardiovascular disease, inflammatory disease, trauma, autoimmune diseases, arthritis, congan rejection, diabetes and diabetic complications, stroke, ischemia, creatment of disease, myocardial infarction, unstable angina or trauma. They can be used in the veterinary treatment of a non-human subject. They can be used to lower cell activation resulting from these diseases and deficiencies. The detection of an elevated level of hydrogen peroxide in plasma or whole blood and in the creatment peroxide dismutase (SOD) indicates leukocyte up to presence of superoxide dismutase (SOD) indicates leukocyte up creatment of a none cardiovascular consultions. An elevated confittion e.g. indicative of the onset of an acute cardiovascular confittion e.g. hyperension or appass and whole blood and in the previous of the presence of SOD is indicative of an acute cardiovascular confittion e.g. hyperension or appass. Anysozol-YSO334 represent peptides condition e.g. hyperension or aspass. Anysozol-YSO334 represent peptides condition e.g. hyperension or aspass. Anysozol-YSO334 represent peptides condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ô
                                                                                                                                                                                                                                                                                                                                                                                                                               Use of cell activating compositions in developing products for diagnosis and treatment of e.g. cardiovascular, inflammatory, autoimmune or Alzheimer's disease, trauma, arthritis, organ rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human, pancreas; pancreatic cancer; pancreatic cancer antigen; detection; diagnosis; identification; cytostatic; neuroprotective; nootropic; immunomodulatory; relaxant; contraceptive; gynaecological; antiinflammatory; cardiant; gene therapy; chromosome mapping; linkage analysis; issue identification; issue typing; forensic; neural; immune system; muscular; reproductive; gastrointestinal; pulmonary; cardiovascular; renal; proliferative.

ABEA466. The human pancreatic cancer antigens, given in AAB54008 to
ABEA466. The human pancreatic cancer antigens have cytostatic,
controlled and pancreatic cancer antigens have cytostatic,
neuroprotective, neocropic, immunomodulatory, ralaxant, contraceptive,
gynaecological, cardiant and antiliflammatory activities, and can be used
in gene therapy. The polynucleotide and proteins can be used for
preventing, treating, or ameliorating a medical condition or in assays
for diagnosing a pathological condition or a susceptibility to one in a
subject. Binding partners to the proteins and the activity of the
proteins can be identified. The pancreatic cancer antigens can be used to
detect, treat or prevent pancreatic disorders, especially cancer.
Agonists and antagonists to the antigens can be used to design nucleic
and diagnostic methods that can be used in chromosome mapping, linkage
and diagnostic methods. The proteins can be used to design nucleic
and diagnostic methods. The proteins can be used to generate antibodies
which are used to purify, detect and target the polypeptides, including
both in vivo and in vitro diagnostic and target the polypeptides, including
brotelins can be used to treat or prevent neural, immune system, muscular,
reproductive, gastrointestinal, pulmonary, cardiovascular, remal or
proliferative disorders. AAC99210 and AAB54467 represent
sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                  New nucleic acid that is a pancreatic cancer antigen for preventing, treating, or ameliorating a medical condition, particular pancreatic cancer, or for use in assays for diagnosing a pathological condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                AAC98773 to AAC99231 encode the human pancreatic cancer associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Score 40; DB 21; Length 146;

The present sequence is bovine chymotrypsinogen. It was included in a review of sequence homologies of several plasminogen activators. Plasminogen is the principal serine procease symogen in the extracellular fluids of vertebrates. Its active form, plasmin, is implicated in pericellular proteolysis associated with a wide range of physiological and pathological processes. Plasminogen expression is physiological and pathological processes. Plasminogen expression is physiological processes. Plasminogen expression is physiological processes. Plasminogen expression is plasminogen to convert it to plasmin or form tight binding complexes with plasminogen to spontaneously convert it to plasmin. The sequence homology analysis has identified a six amino acid peptide involved in plasminogen activation. This peptide is particularly useful when inserted between amino acid residues 644 and 645 of full length human plasminogen activation/recognition site of plasminogen binding proteins. The polypeptides are useful in preparing thrombolytic agents for treating blood clotting disorders such as heart attack.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human, protease, cancer, immune-related disorder, cardiovascular disease, neuronal-associated disease, metabolic disorder; inflammatory disorder; neuronal-associated disorder, metabolic disorder; mod disorder; hypertension, psychotic disorder; neurological disorder; dyskinesia; viral infection; human immunodeficiency virus; HIV; non-viral infection; ocular disease; cytostatic; enzyme.

                                                                                                                                                                                                                   The present invention relates to the isolation of novel human proceases, and the nucleic acids encoding them. The sequences of the invention are useful for treating diseases and disorders such as cancers (e.g. breast, colon, lung), immune-related diseases and disorders (e.g. thelamatory diseases and asthma), cardiovascular diseases and disorders (e.g. restenosis and coronary thrombosis), brain or neuronal-associated disorders (e.g. theumatory thrombosis), brain or neuronal-associated disorders (e.g. theumatory and coronary thrombosis), central or peripheral nervous system diseases, migraines, pain, sexual dysfunction, mood disorders, attention disorders, migraines, pain, sexual dysfunction, confidencion, psychotic disorders, neurobogical disorders, hypotension, psychotic disorders, neurobogical disorders, municalisated for treating viral infections caused by human immunodeficiency virus (HIV), and non-viral infections such as coular disease (e.g. glaucoma) and macular degeneration. AAU82702-AAU82760 represent the novel human proteases of

This invention describes a novel method for the use and preparation of cell activating compositions which involves preparing a cell activating composition composition comprising d in homogenizing pancratic tissue in buffer at about neutral or higher pH to preduce a homogenate; (b) removing particulates from the homogenate; (c) optionally incubating the about neutral or higher pH to preduce a homogenate; (d) removing the homogenate and selecting fractions that exhibit construction activity. The methods can be used for improving treatment outcome or reducing risk of treatment of e.g. cardiovascular clisease, inflammatory disease, trauma, autoimmune diseases, arthritis, congan rejection, diabetes and diabetic complications, stroke, ischemia, Alzheimer's disease, whouse insufficiency, unstable angina or trauma. Congan rejection, diabetes, whouse insufficiency, unstable angina or trauma. Conflex on be used in the veterinary treatment of a non-human subject. Protease inhibitors can be used to lower cell activation resulting from these diseases and deficiencies. The detection of an elevated level of hydrogen peroxide in plasma or whole blood and in the cegulation, e.g. indicative of the onset of an acute cardiovascular cegulation, e.g. indicative of the onset of an acute cardiovascular cegulation, e.g. indicative of the onset of an acute cardiovascular cegulation e.g. hyperesence of a chronic or immune compromised condition e.g. hyperesion or a chronic or immune compromised condition e.g. hyperesion or a chronic or immune compromised condition e.g. hyperesion or sepsis. Activation is localised to the thrombus because cleavage to plasmin is by an enzyme of the blood clotting pathway. Compositions comprising the mutant plasminogen are used for treatment or prevention of thrombosis, etc.
                                                                                                                                                                                                                                                                                                                  Activatable fibrinolytic and antithrombic proteins - activated by e.g. factor Xa, thrombin or activated protein C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Activatable fibrinolytic and antithrombic proteins - activated by e.g. factor Xa_{\rm s} , thrombin or activated protein C

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention describes a novel method for the use and preparation of cell activating compositions which involves preparing a cell activating compositions which involves preparing a cell activating composition composition (a) homogenizing pancreatic tissue in buffer at about neutral or higher pH to produce a homogenate; (b) removing cabout neutral or higher pH to produce a homogenate; (b) removing the forticulates from the homogenate; (c) optionally incubating the creating the protease; and cell activation activity. The methods can be used for improving treatment outcome or reducing risk of treatment of e.g. cardiovascular congans rejection, diabetes and diabetic complications, stroke, ischemia, altahemer's disease, inflammatory disease, trauma, autoimmune diseases, attritis, organ rejection, diabetes and diabetic complications, stroke, ischemia, altahemer's disease, annowable infarction, hemorrhagic shock, diabetic retinopathy, diabetes, venous insufficiency, unstable angina or trauma. They can be used in the veterinary treatment of a non-human subject. They can be used in the veterinary treatment of an on-human subject. They can be used to lower cell activation resulting from these diseases and deficiencies. The detection of an elevated level of hydrogen peroxide in plasma or whole blood and in the presence of superoxide diamutase (SOD) indicates leukocyte up regulation, e.g. indicative of the onset of an acute cardiovascular disorders, such as disease onset or ischemic complications. An elevated clevel of hydrogen peroxide in plasma or whole blood and a low level in the presence of SOD is indicative of a chronic or immune compromised condition e.g. hypertension or sepsie. ANYSO201-YSO334 represent peptides used in the method of the invention or sepsie.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                              Use of cell activating compositions in developing products for diagnosis and treatment of e.g. cardiovascular, inflammatory, autoimmune or Alzheimer's disease, trauma, arthritis, organ rejection,

                               This protein is a plasminogen mutant cleavable by Factor Xa. Activation is localised to the thrombus because cleavage to plasmin is by an enzyme of the blood clotting pathway. Compositions comprising the mutant plasminogen are used for treatment or prevention of thrombosis, etc.

Activation is localised to the thrombus because cleavage to is by an enzyme of the blood clotting pathway. Compositions comprising the mutant plasminogen are used for treatment or prevention of thrombosis, etc.

                                                                                                                                                                                                                                                                                                                                                                                                          The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
New isolated nucleic acid detection reagent for detecting 1003 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                               The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA (ABBS7737-ABB72072)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by a cones. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthamitis. For acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies can be used to downregulate expression and activity of P. acnes polypeptides and codownregulate expression and activity of P. acnes polypeptides and determining P. acnes infections. The antibodies can be used to downregulate expression and activity of P. acnes polypeptides and carginated immunosorbent assay (ELISA).

Codownregulate can determining P. acnes presence, for example, by conzyme linked immunosorbent assay (ELISA).

Codownregulate and of this patent did not form part of the printed construction of the printed form in the involved in the printed form in the involved in the printed form in the production of the printed form in the form and patent did not form at the printed form in the form and patent did not form at the printed form and patent did not form at the printed form and patent did not form at the printed form and patent did not form at the printed form and patent did not form at the printed form and patent did not form at the printed form and patent did not form at the printed form and patent did not form at the form and patent did not form at the form and the patent did not form at the form and the patent did not form at the patent did not form and did not form and pate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

Treferred to as open reading frame. ORFX, where X is 1-11491 for in the specification). ABN15762 to ABN2722 encode the human ORFX in the specification). ABN15762 to ABN2722 encode the human ORFX proteins are useful for reating or preventing a pathology associated with an ORFX-associated disorder. ORFX polynucleotide syndrome associated with ORFX associated disorder. ORFX polynucleotide syndrome associated with ORFX-associated disorder. ORFX polynucleotide squences can be used in the manufacture of a medicament for treating a squences can be used in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperproliferative disorders, haemorrhage, osteoarthitis, beingn tumours, keloid, degenerative disorders, haemorrhage, cransplantation, cardiovascular diseases, diabetes mellitus, systemic transplantation, various immune disorders, disorders infectious diseases, autoimmune disorders auchine solver infectious diseases, autoimmune thyroiditis, myasthenia gravis, rheumatoid arthitis, autoimmune inflammatory eye disease. ORFX proteins are also useful for treating burns, inclaining, olders, for treating osteoporosis, bene degenerative disorders, or periodontal disease, and for gut protection or regenerative or periodontal disease, and for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues and conditions resulting from a systemic cytokine damage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ô

A)Contents: annotation; X-ray crystallography
C)Contents: annotation; X-ray crystallography
C)Contents: chymotrypsinogens are synthesized in the acinar cells of pancreas.
C)Comment: Tryptic cleavage after Arg-15 results in a fully active enzyme (pi-chymotrypsi delta-chymotrypsin); further chymotryptic cleavage liberates the dipeptide Thr-147 and Ass delta-chymotrypsin; from chymotryptic cleavage liberates the dipeptide Thr-147 and Ass delta-chymotrypsin; trypsin homology, cleavage liberates to the degraded form neochymotrypsic; Superfamily: trypsin; trypsin homology, cleavage liberates proteinase; zymogen
E)1-245/Product: chymotrypsinogen #status experimental <2YM>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Z.; Vanacek, J.; Keil, B.; Sorm,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A, Molecule type: protein
